## 1x2 /2x2 Large Fiber Core $400 \mu \mathrm{~m}$ Coupler/Splitter

The FC Series fiber optic coupler is based on fused biconical taper technology and compact packaging structure. It features good uniformity, low excess loss and very low polarization sensitivity. The device is ideal for splitting or combining light with exceptional performance over a wide wavelength range

## Features

- Wavelength Independent
- Low Insertion Loss
- Low PDL
- Highly Stable \& Reliable
- Ultra Low Cost

## Application Notes

## Fiber Core Alignment

Note that the minimum attenuation for these devices depends on excellent core-to-core alignment when the connectors are mated. This is crucial for shorter wavelengths with smaller fiber core diameters that can increase the loss of many decibels above the specification if they are not perfectly aligned. Different vendors' connectors may not mate well with each other, especially for angled APC.

## Fiber Cleanliness

Fibers with smaller core diameters ( $<5 \mu \mathrm{~m}$ ) must be kept extremely clean, contamination at fiber-fiber interfaces, combined with the high optical power density, can lead to significant optical damage. This type of damage usually requires re-polishing or replacement of the connector.

## Maximum Optical Input Power

Due to their small fiber core diameters for short wavelength and high photon energies, the damage thresholds for device is substantially reduced than the common 1550 nm fiber. To avoid damage to the exposed fiber end faces and internal components, the optical input power should never exceed 20 mW for wavelengths shorter 650 nm . We produce a special version to increase the how handling by expanding the core side at the fiber ends.
