# Fiber-Fiber™ Optical Switch

1x1, Dual 1x1, 1x2

(SM, PM, MM,) (Broadband, Bidirectional)

(Protected by pending patents)

## Product Description

The FF Series fiber optic switch connects optical channels by direct fiber to fiber connection via a micro-mechanical auto-alignment platform and activated via an electrical relay. The advanced design significantly increase the performance, offering unprecedented low optical loss, little wavelength dependence with no coatings, high power handling, as well as low cost. Latching operation preserves the selected optical path after the driver signal has been removed. The switch has integrated electrical position sensors. The switch is bidirectional and conveniently controllable by 5V TTL.

Using no lens, the FF Series switch can accommodate all type of fibers, including SM, MM, PM, double cladding, bendable, large core, small core. The FF switches provide performance for special fiber no other technology can match.

## Features

- Low Optical Distortions
- High Isolation
- High Reliability
- Fail-Safe Latching

The load is a resistive coil which is activated by applying 5V (draw ~ 40mA). Agiltron offers a computer control kit with TTL and USB interfaces and Windows™ GUI. We also offer RS232 interface as an option – please contact Agiltron sales.

### Latching Type – Single Coil

Application Note: Applying a constant driving voltage increases stability. The switches can also be driven by a pulse mode using Agiltron recommended circuit for energy saving.
